

Innovative Research Project: Understanding Diabetes Prevention and Remission among BAME Communities

Greetings,

I am Marafee, a doctoral candidate at the University of Wolverhampton, and I'm currently undertaking a vital research project under the supervision of Dr. Ojo, Opeolu. Our project focused on diabetes prevention and remission, with a special focus on Black, Asian, and Minority Ethnic (BAME) groups, due to the higher incidence of diabetes, making our research both relevant and urgent.

Study Focus and Call for Participants

The core of my research is around exploring the determinants of diabetes prevention and remission, particularly within Black, Asian, and Minority Ethnic (BAME) backgrounds. These communities are disproportionately affected by diabetes, especially in the West Midlands region, UK.

Invitation to local community and globally

We cordially invite you to participate in and distribute our survey among your acquaintances, both within your local community and globally. Your active participation and willingness to share this survey are instrumental in enabling us to conduct a comprehensive analysis of diverse demographic groups. Our objective of undertaking this is to analyse and compare the responses of participants from the West Midlands, the broader UK, and those residing abroad. Your engagement in this study is of massive value to our research efforts.

Invitation for Collaboration through Survey Participation

We invite you to be a part of this groundbreaking study by participating in our survey. Your participation is not only invaluable in enriching our research but also instrumental in shaping better diabetes management practices for diverse communities.

Ethical Compliance

All necessary ethical Approval for this research has received a favourable ethics review from the Life Sciences Ethics Committee (LSEC) at the University of Wolverhampton., ensuring the highest standards of research integrity.

Survey Details

The survey link is provided below.

Your Role and Impact

By joining this study, you contribute significantly to the robustness and depth of our findings. The implications of your participation extend beyond our research, offering potential benefits to numerous lives touched by diabetes. Together, we can embark on a journey towards a more profound understanding and effective management of diabetes across diverse populations.

Warm regards,

Marafee

Doctoral Researcher, University of Wolverhampton
